

Track 2: Using Technology for Complex Care Management

Additional Activities:

10:45 AM – 1:30 PM

*Help Squad – one-on-one PCMH and Meaningful Use Support
(Innovation Room)

*Promising Practices Gallery Walk Raffle (Inside perimeter of the office)

1:00 PM

*Promising Practices Raffle (Training Room)

See the back of your agenda to participate

Partnership HealthPlan of CA Care Management and Care Planning

James Cotter, MD MPH

November 2017

Why do Care Management?

- Most expensive 1% of patients spend 20% of our national health expenditures
- Complex chronic conditions often have:
 - Poor coordination
 - Unnecessary utilization
 - Poor outcomes

Optimizing Care Management

- **Practice based**
 - Care managers are co-located where patients receive their care
 - Documented reduction in health expenditures of 7% (Medicare)
- **Payer Catalyzed**
 - Payment models that facilitate and encourage care management
 - PMPM payments that allow flexibility
 - Coordinated strategy between payer and providers

Powers, B et al. Optimizing High Risk Care Management. JAMA, Jan 2015

Is Care Management Effective?

- ▶ CHF, DM, CAD – **yes**
 - ▶ Health management skills and health knowledge changed health behaviors
(Vasc Health Risk Manage. 2010; 6:297-305)
- ▶ Depression – **yes**
(JAMA 2002;288(2):2836-2845)
- ▶ Hospital readmission – **yes**
(Social Work. 2015;60(3):248-255)
- ▶ Frail Elderly – **yes**
(J Am Geriatric Soc. 2014;62(12):2369-2376)
- ▶ Dementia – **no**
 - ▶ No good evidence on health expenditures or hospitalizations
(J Nutr Health Aging. 2010;14(8):669-676)

What Interventions Are Most Effective?

- Medication reconciliation
 - Especially if you give the patient a pill organizer
- Transportation
 - The new state benefit has been very helpful
- One number to call to get help
 - Appointments, questions, messages
- Motivational Interviewing
 - Engaging the patient in his or her own care

Finding Patients

- Claims data with quantitative risk and prediction tools
 - A backwards look at costs
 - May miss patients with complex psychosocial needs
- High risk conditions
 - Patients with a high risk condition are not always high risk
- Frequent acute utilization
 - Prior utilization is not always predictive of future use
- Referral by clinician
 - Challenging patients may not always “care manage” well
- Patient self referral
 - Patients who need the most help may not have the motivation or ability to seek help

Key Assessments: How much do you need to know?

- HRA: Health Risk Assessment
 - Medical history, hospital and ED utilization
 - Behavioral and mental health, functional capacity, housing stability
- SHA: Staying Healthy Assessment
 - Assesses acute, chronic and preventive needs
 - Nutrition, activity, safety, dental, mental, sexual health
- AUDIT-C, DAST-10: Assess substance abuse risk
- PHQ 2/9: Depression score
- PAM: Patient Activation Measure

What Else Would You Want to Know?

- Mental illness assessment
- Trauma history and adverse childhood experiences
- Cultural and linguistic barriers to care
- Memory and cognitive assessment
- Frailty score
- Hospital admission risk score
- Functional (ADL) assessment: vision, hearing, ambulation
- DME needs
- Home safety and fall risk assessment
- Caregiver support, long term support service needs
- Advanced directive and goals of care

The Care Plan in IOPCM

- **Medical History:**
 - Current problems and medications, allergies, hospitalizations
- **Physical Health:**
 - Functional assessment and DME needs, nutritional issues, dental
- **Review of Assessments:**
 - HRA, SHA, PHQ2/9, AUDIT-C, PAM level
- **Psychosocial challenges:**
 - substance abuse, cognitive assessment
- **Self-Management skills:**
 - medication adherence, patient activation, physical activity
- **Summary Acuity Score**
 - How much time will it take to care for the patient?

Engaging Patients

- Engaging patients
 - Influencing individual decisions
 - Sometimes one decision at a time
- Patient Activation Measure
 - Tier 1 – dependency
 - Tier 2 – starting to pay attention, learning
 - Tier 3 – building confidence and taking action
 - Tier 4 – maintaining health behaviors
- Motivational Interviewing

Motivational Interviewing

- ▶ Developed to treat problem drinkers by William Miller in 1983 and later enhanced by Miller and Stephen Rollnick in 1991.
- ▶ Explore and resolve ambivalence
- ▶ Client centered – non judgmental
- ▶ Goal oriented
- ▶ Engage, Focus, Evoke, Plan
- ▶ Envision a better future and change behavior to achieve it

- ▶ Some people are naturally talented at this, but it really is a learned skill that takes practice.

Shared Action Plans

- Given to the patient at a face to face visit
- Includes Care Manager contact number and PCP's name
- Current Medications:
 - Highlighting any **recent changes**
- Follow-up: PCP appointments, labs or imaging needed
- Treatment:
 - Referrals given
 - Specific things the **patient agrees to do**
- Keep it simple and hand it to the member

Health Homes Program Evolution

- 1992, AAP: **Medical home** for care of infants, children and adolescents
- 2002, AAP: The Medical Home
- 2004, AAFP: Future of Family Medicine
- 2006, ACP: The Advanced Medical Home
- 2007: Joint Principals of the **Patient Centered Medical Home**
(AAFP, ACP, AAP, AOA)
- 2008: DHHS Medical Home Workgroup
- 2009: SAMHSA
- 2010: ACA section 2703: **Health Homes Program**

Health Homes for Patients with Complex Needs

CMS Guiding Principles:

- Improve care coordination
- Integrate palliative care into primary care delivery
- Improve health outcomes for people with high risk chronic diseases
- Strengthen team based care using community health workers
- Strengthen community linkages
- Reportable net cost avoidance within 2 years

Health Homes for Patients with Complex Needs

DHCS Objectives:

- ▶ Ensure providers serve members experiencing **homelessness**
- ▶ Increase **integration of physical and behavioral health**
- ▶ Increase **care coordination** close to the point of care delivery
- ▶ Referral to **community and social support services**
- ▶ Enhance the use of **health information technology**

The Care Plan IOPCM2 and Health Homes

- **Physical Health**
 - Acute and chronic problems
 - Diet and nutritional needs
 - Palliative care and advanced care planning needs
- **Psychosocial Health**
 - Mental and behavioral issues
 - Substance abuse
 - Trauma informed care
- **Social Support**
 - Long term support services needs
 - Housing stability/homelessness
- **Self Management skills**

Trauma Informed Care

- Higher disease rates
- More substance use disorder
- More behavioral health issues
- Poorer health outcomes
- Social and emotional impairment
- Cognitive impairment
- Maladaptive coping strategies

http://developingchild.harvard.edu/resources/multimedia/videos/three_core_concepts/toxic_stress

DHS HHP Reporting Draft

- ▶ **Enrollment**
 - ▶ Enrolled, Not Eligible, Unsuccessful, Duplicate Program, Dis-enrolled
 - ▶ Number of care managers (RN ratio to member enrollees)
- ▶ **Member Activity**
 - ▶ Housing stability, referrals, received supportive housing
 - ▶ HAP completed within 90 days
- ▶ **Network Capacity**
- ▶ **Engagement** percentage within 6 months
- ▶ **Blood Pressure** control by age group (32 data fields)
 - ▶ CMS required health measure

All of this reported on an excel spreadsheet

HHP Reporting Requirements

The current world:

- Excel spreadsheets with specific data elements
- Document who is enrolled and dis-enrolled
- Documenting health assessment dates
- Documenting the care plan
- Auditing shared action plans

The future?

- How much can we extract directly from your EMR?

A PHC New Care Management Program: Intensive Home-based Palliative Care

PHC intensive care management program

- ▶ January 1- a new benefit for all PHC members
- ▶ Four Covered Diagnoses:
 - ▶ Cancer: stage 3 and 4
 - ▶ CHF with low LVEF
 - ▶ COPD dependent on oxygen
 - ▶ End-stage Liver Disease
- ▶ Life expectancy of 12 months

UCSF Safety Net Study 2010 - 2013

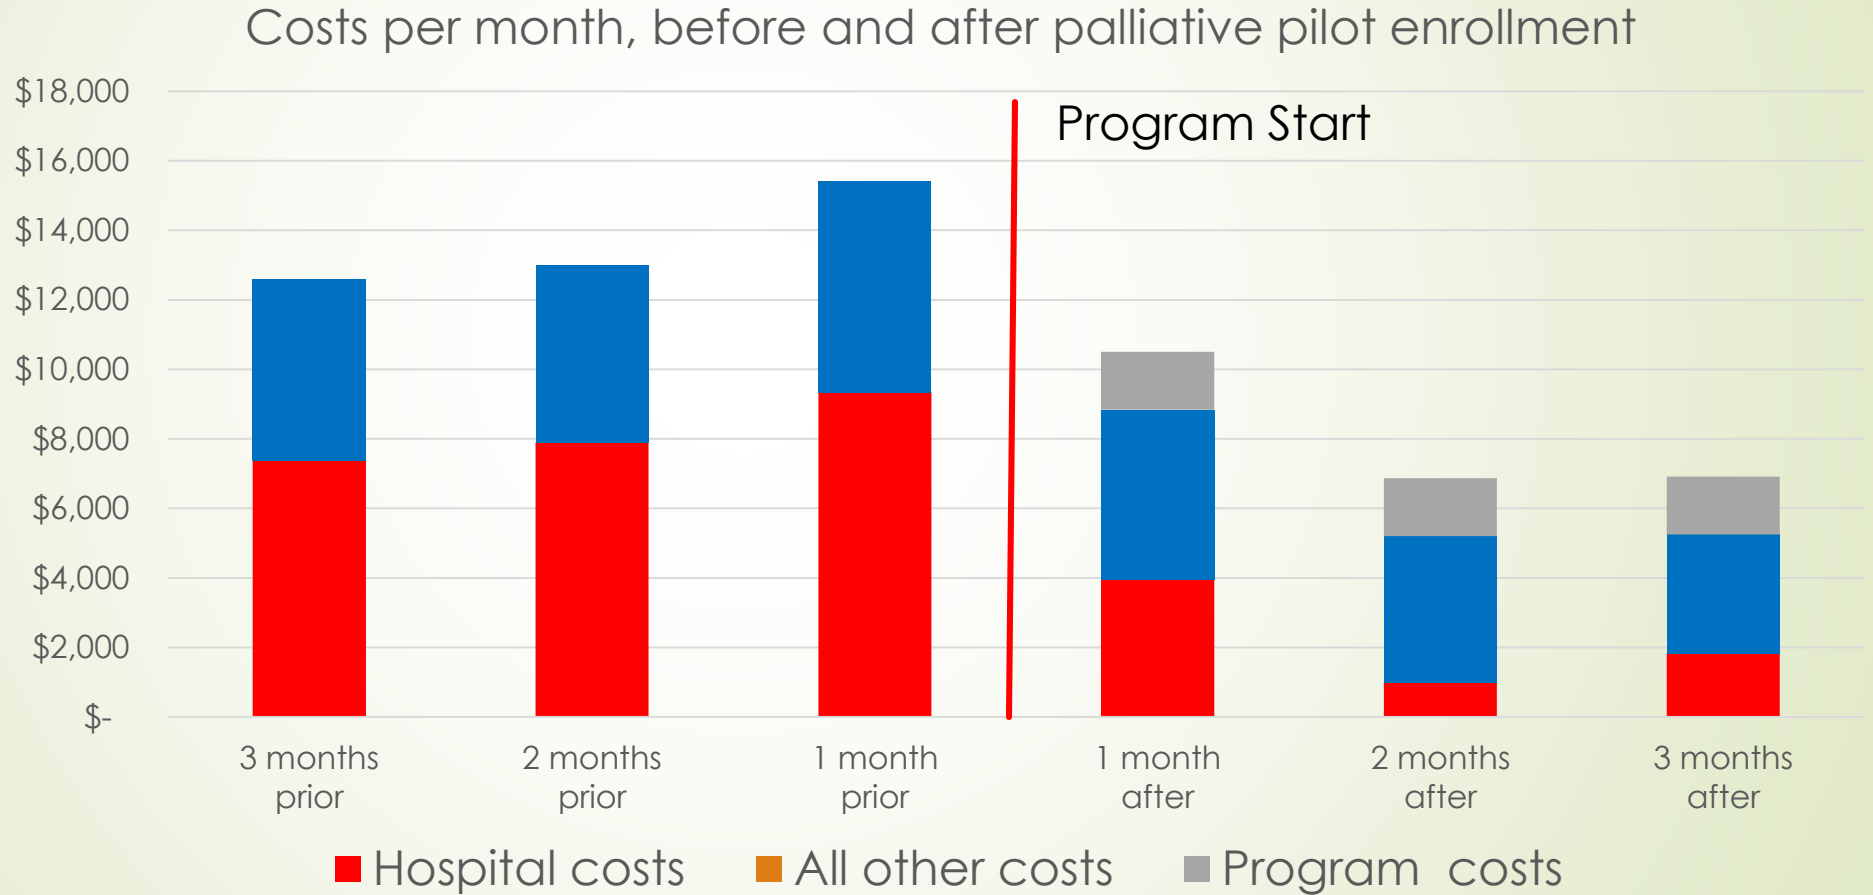

➤ 403 Patients:

- Hospitalized in last 6 months of life 76%
- Hospitalized in the last month of life 45%
- Multiple admissions in last month of life 21%
- Died in the hospital 33%

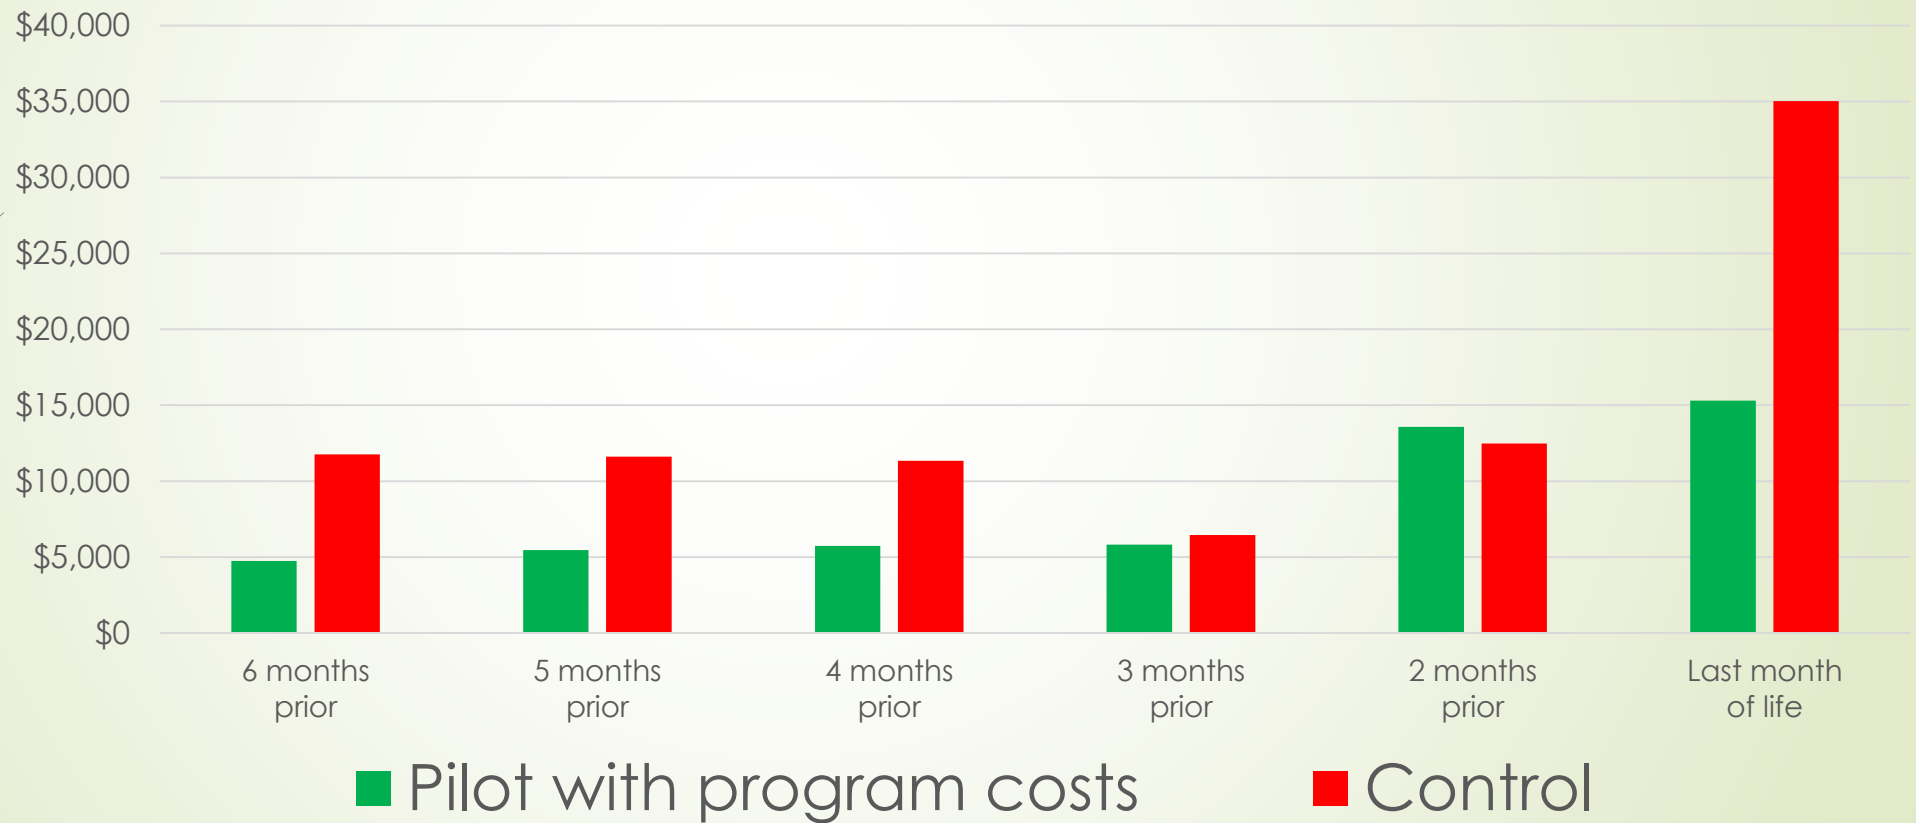

➤ Hospitalization is common at the end of life

Pre and Post Enrollment Costs

Hospital Costs in Last 6 Months of Life

Triple Aim

Better Outcomes
Higher Satisfaction
Lower Costs

Palliative care achieves the triple aim:

- providing comprehensive end of life care with
- high patient satisfaction
- without an increase in health care costs

HHP and Palliative Care Comparison

IOPCM

- ▶ Two or more chronic conditions
- ▶ Inpatient stay or ED visits
- ▶ Chronic condition risk score
- ▶ Homelessness
- ▶ Intermittent contact

Palliative Care

- ▶ Four covered diagnoses
- ▶ Inpatient stay or ED visits
- ▶ 12 month life expectancy
- ▶ Willing to have home care
- ▶ Needs 24/7 support

Consider Home Based Palliative Care

- Cancer, Advanced Liver Disease, CHF, COPD
- Using the ED or hospital for symptom management
- Declining functional status
- Death within 12 months would not be unexpected
- Willing to be managed at home for their symptom control
- Need 24/7 support for end of life care

USING TECHNOLOGY FOR CARE PLANNING / COMPLEX CARE MANAGEMENT

Marin City Health and Wellness Center

November 2017

WHY CCMR?

HEALTH EDUCATION

- MCHWC utilizes eCWs CCMR (PHM) for health education and the Park Prescription program
- Health educator develops problem-based care plans for each patient in their initial meeting
- Updates are done as needed, at least every 6 months
- Most common conditions: diabetes, hypertension, obesity, depression
 - HE works with closely with providers by assigning care plans to providers to look over
 - HE develops tangible Action Plans that patients can walk away with which include information on how to contact their providers, their circle of care, etc.

PARK PRESCRIPTION PROGRAM

- The Health Educator uses the care management program extensively to document biometric data as well as qualitative data for the Park RX program.
 - All participants are enrolled in the Park RX program and assigned problems based on their conditions
 - Biometric data is tracked and vitals show up in the visit progress note alongside the care plans
 - Action plans are completed with patient and printed at the end of each session

PATIENT CENTERED MEDICAL HOME

- MCHWC achieved PCMH recognition in 2017 and used CCMR to conduct and document care planning
 - A component of achieving this status was our work in care planning, specifically our depression and diabetes care plans
 - Depression care plans are conducted by behavioral health providers
 - Diabetes care plans are conducted by the Health Educator
 - These patients are tracked and followed up with at regular intervals

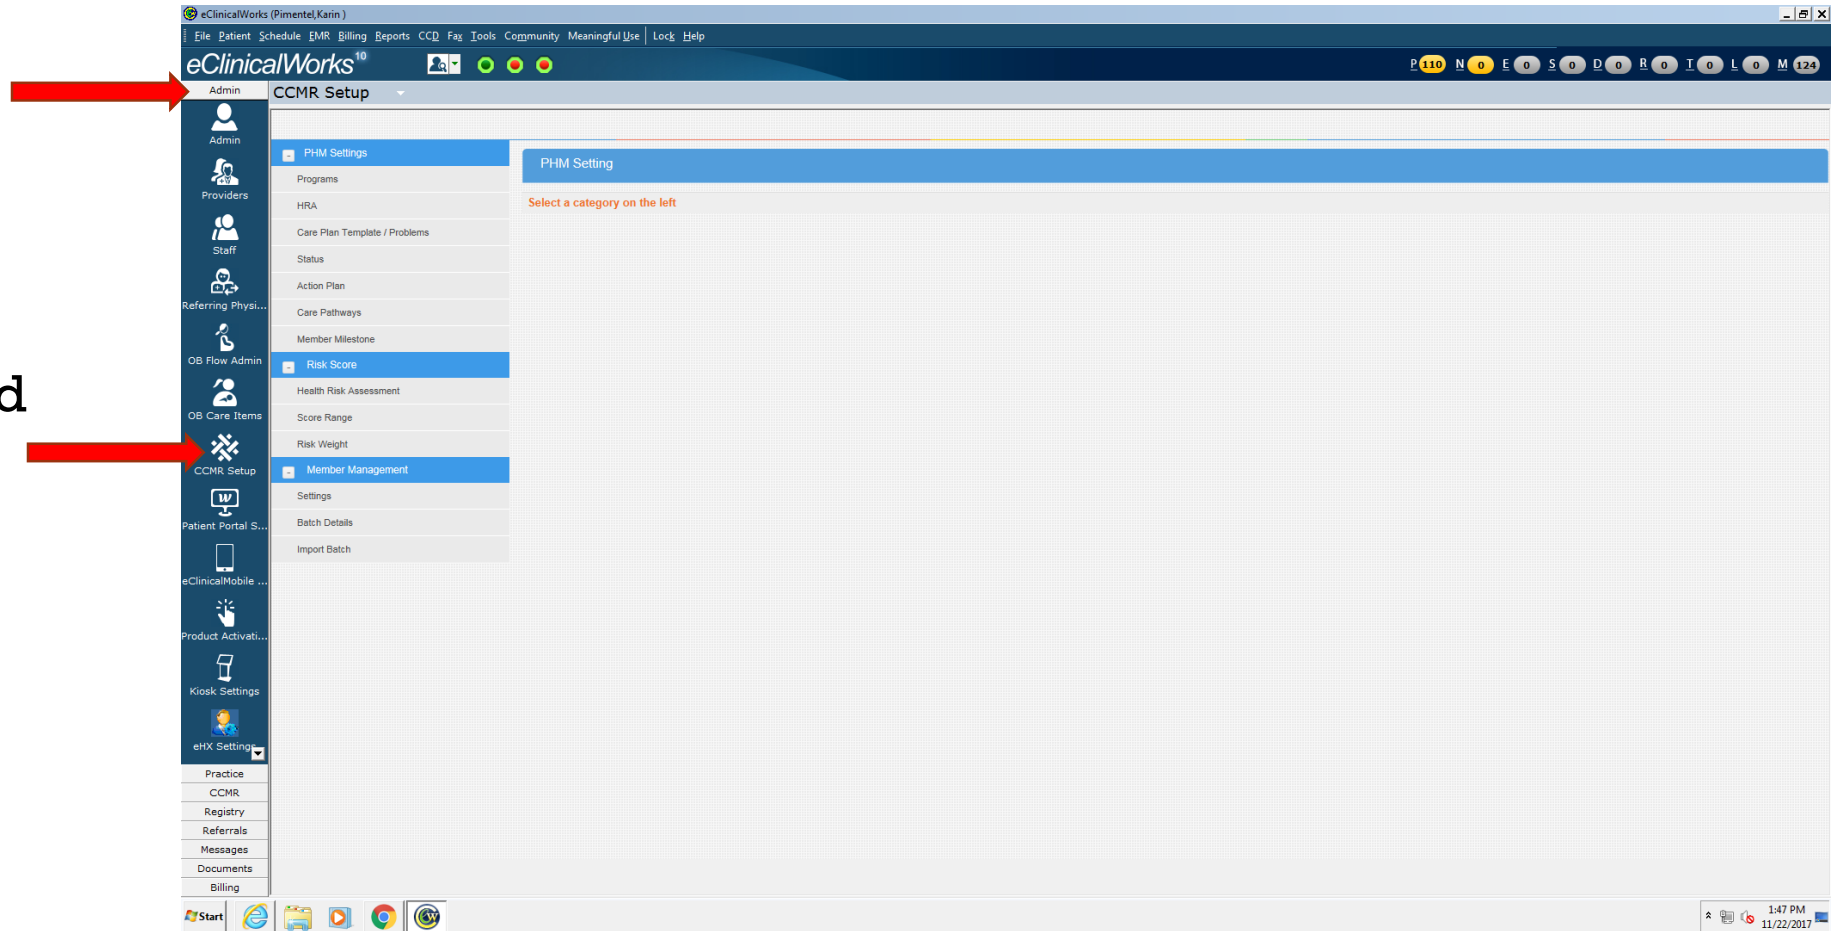

LIVING HEALTHY PROGRAM

- Marin City Health and Wellness Center's Health Homes Program
- All participants in LHP work with an LCSW and Care Manager to develop a care plan and regular action plans
- Care Planning module allows for vitals and PHQ9 to be attached to care planning progress notes

IMPLEMENTATION

- Activation – eCW
- Training – eCW
- Choosing “problems” and “programs” – MCHWC
- Creating care plans - MCHWC

DASHBOARD/ ENROLLED PATIENTS

The screenshot shows the eClinicalWorks Dashboard interface. The top navigation bar includes 'Admin', 'Practice', and 'CCMR'. The main dashboard area has a 'Selected Filters' section with 'Provider Name: Pimentel, Karin' and a 'Clear All' button. Below this is a table with the following columns: Patient Name, Appointment Time, Visit Status, Reason, Provider, Duration, Arrival Time, Status, Room No, and Visit Type. The 'No of Results' is set to 20. The table is currently empty.

The screenshot shows the eClinicalWorks Care Planning section. The top navigation bar includes 'Admin', 'Practice', and 'CCMR'. The main dashboard area has a 'Selected Filters' section with 'Program: All Programs' and a 'Clear All' button. Below this is a table with the following columns: Patient, PCP, Care Manager, Care Coordinator, Provider, Programs, Start Date, and End Date. The 'No of Results' is set to 15. The table is currently empty.

CCMR/PHM HUB

- Go through eCW hub to look at past care plans or virtual visit
- Do not use for new care plan if the patient is on the schedule
- Recommended: patient on schedule, go through progress note

The screenshot displays the eClinicalWorks (eCW) interface. The main window shows the 'My Patients' section with a search filter for 'Patient' and 'PCP'. A 'Patient Hub' window is open for 'Marley, Bob N', displaying patient information such as name, address, DOB, age, sex, insurance, and PCP. The 'PHM Hub' button is highlighted with a red arrow.

SUCCESSSES/CHALLENGES

- Goals and action plans keep providers as well as patients on track
- Tangible plan for patients to walk away with
- Assign to shared providers – circle of care
- Track quantitative and qualitative metrics at once
- Challenges
 - CP loading time on the front end
 - Training all providers to access and utilize CP
 - Tracking and running reports

Care Planning... What Next?
RCHC Symposium on the Future of Complex Care

November 28, 2017

The care plan may be implemented as a documentation template in any health record or it may be implemented in case management software or add-on such as CCMR.
