

**Addendum to 2020 PIP Program Document
May 22, 2020**

Quarter 2 of 2020 measures were revised due to significant operational changes caused by the COVID emergency. For quarters 3 and 4, 2020, RCHN will transition back to the clinical measures as designed for the 2020 program year. RCHN anticipates a significant ongoing impact in the performance on the measures due to the change from primarily in-person care to primarily telehealth. For that reason, RCHN will make adjustments to the clinical measure targets, relative improvement, and the transition of care measure. All program elements not addressed in this document will revert to the original 2020 program document as used for quarter 1. Due to COVID 19 and the changing environment around clinical appointments, RCHN will review the Q3 data in case any further adjustments are needed.

Clinical Quality Measures

The following Clinical Quality measures will return for quarter three with revised targets as in the table below:

1. Blood Pressure Control
2. Blood Sugar (A1c) Control in Patients with Diabetes
3. Colon Cancer Screening
4. Well Child Care At 15 Months

Clinical Quality Measure Targets:

Measure/Results	HTN – BP control	DM <9	Colon Cancer Screening	6 WCC by 15 months
TARGETS				
2014 Target	55%	65%		
2015 Target	61%	71%		
2016 Target	64%	71%		
2017 Target	65%	71%	40%	
2018 Targets	65% full points 62% ¾ points 59% half points	71% full points 63% ¾ points 55% half points	40% full points 36% ¾ points 32% half points	
2019 Targets	67% full points 64% ¾ points 61% half points	71% full points 63% ¾ points 55% half points	41% full points 37% ¾ points 34% half points	

2020 Targets (Q1)	70% full points 67% ¾ points 64% half points	71% full points 65% ¾ points 60% half points	44% full points 40% ¾ points 37% half points	50% full points 45% ¾ points 40% half points
2020 Adjusted Targets (Q3 and Q4)	67% full points 64% ¾ points 61% half points	68% full points 62% ¾ points 57% half points	41% full points 37% ¾ points 34% half points	50% full points 45% ¾ points 40% half points
BENCHMARK COMPARISONS				
HP 2020	61.2%	83.9%	70.5%	N/A
QIP Targets 2020	61.04% (full pts)	50.97% (full pts)	32.24% (full pts)	65.83% (full pts)
UDS CA – 2018	65.6%	65.0%	45.7%	N/A

Payment:

Relative improvement points

At the end of Q4, health centers ending the reporting year at 70 - 89% of points will be able to earn additional funds if the health center achieves >10% relative improvement in any one qualifying clinical measure. Qualifying measures are any of the four clinical measures that did not make full points in the 4th quarter. Qualified health centers that achieve the improvement threshold will receive 50% of the funds in reserve for that health center.

Calculation for Well-Child Visits:

$$\frac{(\text{Fourth quarter 2020 performance}) - (\text{First quarter 2020 performance})}{100 - (\text{First quarter 2020 performance})}$$

Calculation for Hypertension: Blood Pressure Control, Blood Sugar (A1c) Control in Patients with Diabetes, or Colon Cancer Screening

$$\frac{(\text{Current year performance}) - (\text{previous year performance})}{100 - (\text{previous year performance})}$$

Care Management Measure

Care Management – Transition of Care

The questions for quarters three and four have been updated:

Health Centers will report quarterly on one question related to transition of care and submit a copy of the care or action plan as described in quarter 4:

Quarter 3: Describe how your health center has continued to do care management since March 2020. Who is being outreached to? How are you engaging patients? and are case managers using telehealth?

Quarter 4: Please describe any changes to your transition of care program since March 2020. What are your top 1-3 challenges in managing transitions during the COVID epidemic.
